Precast Tunnel Description

Precast Concrete Tunnel is used & has application for conveyance and transmission of Communication and Power - Electrical Conduit. As well as Steam & Condensate Return Piping as well as applications for small Waterway Conveyance. The underground tunnel with removable covers provides quick and easy access to buried lines / pipes for general service and easy long term maintenance purposes. Precast Tunnels also give protection against corrosion and damage from corrosion due to direct burry - soil, stone, water, and other elements. Tunnels are available in various widths & rise (See Tunnel tables). Units are available in Traffic or Non-Traffic loading to meet your specific jobsite requirements.

Please contact our engineering staff for additional tunnel sizes to meet your specific project requirements.
