

SOLAR PANEL BALLAST SLAB

CASE HISTORY—HILTON, NY

2017

Kistner Concrete Products Inc., Lockport & Springville Plants, recently completed manufacturing and supplying over 1000 Precast Solar Ballast Slabs for a project in Hilton, NY. Kistner's customer, a Buffalo based Solar Company, was very pleased with the quality & schedule for the fast track project. The Solar panel industry is growing and this is Kistner's first project in this market. The owner and engineers had difficulty with other producers, but were extremely pleased with the quality of the units Kistner sent out on to the project.

Schedules are extremely tight on these Solar Panel Projects.

Kistner developed a "KAIZEN" approach to fast, low cost, in-house designed & fabricated molding system to double pour products.

The "Egg-Layer" Mold concept is a new concept mold design and is very fast and production friendly.

Hopefully this concept will give Kistner a big advantage in the new market.

The project went off without an issue and Kistner's Sales team is aggressively pursuing new opportunities in this market.
